Özgün Aksüzek Portfolio

Profile

Certified Project Manager with over 7 years of experience delivering software- and system-driven technical projects in telecommunications and airport infrastructure. Strong background in system integration, risk and quality management, and technical coordination in safety-critical environments. Currently pursuing an M.Sc. in Electronics and Computer Engineering with a focus on embedded systems and signal-based applications.

Professional Experience

Project Manager – Türk Telekom 06/2022 – 08/2023

- Led technical system projects within the PMO with responsibility for schedule, budget, and quality control.
- Applied Agile and classical project management methodologies.
- Coordinated cross-functional teams and external vendors.
- Reduced operational costs by 20% through process optimization.
- Managed deployment of 60+ EV charging stations including hardware, software, and backend integration.

Project Manager – Special Airport Systems, İGA Istanbul Airport 05/2019 – 06/2022

- Managed mission-critical, software-supported airport systems.
- Coordinated system integration between hardware, software, and operations teams.
- Supported testing, validation, and commissioning (reduced downtime by 15%).
- Led vendor coordination and contract management.

Special Airport Systems Engineer – İGA Istanbul Airport 04/2017 – 05/2019

- Designed and reviewed electrical and system schematics.
- Supported software-hardware integration and troubleshooting.
- Prepared technical documentation and performance analyses.

Education

M.Sc. Electronics and Computer Engineering – FH Joanneum, Graz since 08/2023

Master Thesis: DCF-77 Receiver for FMCW Radar Time Synchronization

- Designed and developed a complete DCF-77 receiver system for high-precision time synchronization of an FMCW radar system.
- Analyzed DCF-77 signal structure (amplitude modulation, pulse-width encoding, BCD decoding, parity verification).
- Designed and simulated the analog front-end (signal amplification, filter design, comparator stage) using LTspice.
- Dimensioned operational amplifier and filter parameters for noise suppression and signal stabilization.
- Developed embedded C firmware for MSP430 microcontroller for pulse-width measurement, decoding, and RTC update.
- Implemented input capture, timer interrupts, and software debouncing techniques.

- Designed PCB schematics and layout using Altium Designer.
- Performed system integration and validation under real signal conditions.

MBA – Yildiz Technical University, Turkey

2018 – 2020

B.Sc. Electrical and Electronics Engineering – Sakarya University, Turkey

2008 – 2014

Certifications

PMP® | PMI-ACP® | PSM I

Technical Competencies

Embedded Systems: MSP430 microcontrollers, timer configuration, input capture, interrupt-driven signal processing, real-time decoding, RTC synchronization

Analog & Circuit Design: Op-amp-based signal amplification, active/passive filter design, comparator circuits, signal conditioning, noise suppression

Simulation & Analysis: LTspice (transient and frequency analysis), MATLAB/Simulink, signal validation, system modeling

Power Electronics: Series resonant converters, transformer design, magnetic coupling modeling, switching loss analysis, high-frequency system evaluation

PCB Design: Schematic capture, PCB layout, EMC considerations, component selection, prototyping

Software: Embedded C, structured firmware architecture, debugging, low-level hardware programming

Project Management: Agile and classical methodologies, risk and quality management, stakeholder communication, system integration
